Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this Amendment may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Amendment 1 to International Standard ISO/IEC 7816-6:1996 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 17, *Identification cards and related devices*.

Identification cards — Integrated circuit(s) cards with contacts —

Part 6:

Interindustry data elements

AMENDMENT 1: IC manufacturer registration

Page 4, subclause 4.4

In last line, change "table 8" to "table 10"

Page 8, after subclause 6.9

Add the following text as new subclause 6.10:

6.10 IC manufacturer registration

6.10.1 Scope

This subclause specifies:

- the numbering system,
- the rules for assignment, and
- the assigned values

to identify manufacturers of integrated circuits used in contact and/or contactless integrated circuits cards.

6.10.2 Numbering system

The structure and coding of the IC manufacturer identifier is one byte binary with a reserved value for future extension ('FF' reserved for future extension)

This byte shall be used according to Table 8:

Table 8 — Coding of IC manufacturer identifiers data element

Hexadecimal Value	Use
'00'	RFU
'01' - '7E'	See assignment and registration procedure in 6.10.3 and currently registered identifiers in 6.10.4, Table 9
'7F'	RFU
'80'	RFU
'81' - 'FE'	Proprietary
'FF'	Reserved for future extension

6.10.3 Assignment of IC manufacturer identifiers

The IC manufacturer identifiers (range '01' - '7E') are assigned and registered by the ISO/IEC JTC 1/SC 17 Secretariat ¹⁾ according to the following rules:

- the assignment is made upon request by an IC manufacturer or any interested party;
- a single number will be assigned to each manufacturer (next available number);
- a copy of the register shall be made available upon request to the ISO/IEC JTC 1/SC 17 secretariat.

6.10.4 Register of IC manufacturer identifiers

The data object IC manufacturer identifier has the tag '5F4B'. The assigned values for the related data element are shown in Table 9.

Table 9 — Registered IC manufacturers
