Partie 15: Application des informations cryptographiques

AMENDEMENT 1: Exemples d'emploi de l'application des informations cryptographiques

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Amendment 1 to ISO/IEC 7816-15:2004 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 17, *Cards and personal identification*.

Identification cards — Integrated circuit cards —

Part 15:
Cryptographic information application

AMENDMENT 1: Examples of the use of the cryptographic information application

Insert the following new annex after Annex D.

Annex E
(informative)

Examples of the use of the cryptographic information application

E.1 Introduction

The purpose of this informative annex is to provide practical examples of the use of the cryptographic information application. By providing sample program code for each example, programmers can see the programmatic connection between high-level ASN.1 representations and low-level BER representations and thus create more efficient and more compact software that uses the cryptographic information application.

Each clause in the annex is a free-standing example and consists of four paragraphs:

1. Description of the example
2. A specification of the example described in paragraph (1) in commented ISO/IEC 7816-15 ASN.1 constructs, using the formal value notation defined in ISO/IEC 8824-1.
3. Annotated code in the ISO/IEC 9899 TC2 C programming language for BER encoding and decoding according to the ASN.1 specification of paragraph (2).
4. BER encoding of the example as produced by the encoder of paragraph (3). Two examples also include graphic representations of the BER at the end of the Annex.
5. The source code provided in paragraph (3) was compiled and run to generate the output shown in paragraph (4).

A transcription of the ASN.1 encoding of the Cryptographic Information Application listed in Annex A above was used for all examples. A free, publically-available ASN.1 compiler was used to generate the BER encoders and decoders from this ASN.1.

E.2 Encoding of a Private Key

E.2.1   Cryptographic Information Application Example Description

This is an example of an ISO/IEC 7816-15 RSA private key.

E.2.2   ASN.1 Encoding of an RSA Private Key

```
privateKeys objects { -- SEQUENCE OF --
        privateRSAKey { -- SEQUENCE --
            commonObjectAttributes { -- SEQUENCE --
                label '4b455931'H  -- "KEY1" --,
                flags '80'H,
                authId '41444d'H  -- "ADM" --,
                userConsent 1
            },
            classAttributes { -- SEQUENCE --
                iD '9b'H,
                usage '2040'H,
                native TRUE,
                accessFlags '98'H,
                keyReference 10
            },
            subClassAttributes { -- SEQUENCE --
                keyIdentifiers { -- SEQUENCE OF --
                    { -- SEQUENCE --
                        idType 5,
                        idValue '3132333435363738'H  -- "12345678" --
                    }
                }
            },
            typeAttributes { -- SEQUENCE --
                value indirect path { -- SEQUENCE --
                    efidOrPath '3f004041'H
                },
                modulusLength 1024
            }
        }
    }
```

E.2.3   Code Encoding and Decoding BER from the ASN.1

```c
/*

E.5 Encoding of the ESIGN Cryptographic Information Application

E.5.1 Cryptographic Information Application Example Description

The encoding is an example of a Cryptographic Information Application for the ESIGN as described in Section 16 of CWA 14890-1:2004

E.5.2 ASN.1 Encoding of the IAS Cryptographic Information Application
